Election/Restrictions

Applicant's election of Group III, claims 17-20, in the response filed 11/04/03 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

This application contains claims 1-16 and 21-42, drawn to an invention nonelected with traverse in the response filed 11/04/03. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Information Disclosure Statement

The information disclosure statement filed 5/20/03 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Art Unit: 1754

Claims 17-20 are rejected under 35 U.S.C. 102(a) as being anticipated by Day et al. ("Isolation and Structural Characterization of Tetra-*n*-propyl Zirconate in Hydrocarbon Solution and the Solid State", p.5738-5746).

Day et al. studies $Zr_4(OPr^n)_{16}$ (see abstract) and addresses the difficulty in purifying these zirconium alkoxides (see generally Introduction text of page 5738). Day et al. further teaches obtaining a contamination level of 1-3% in NMR samples, which encompasses the claimed purity levels of at least 97% and at least 99%. In addition, Day et al. teaches that distillation of $Zr(OPr^n)_4$ yields the "analytically pure" $Zr_4(OPr^n)_{16}$ (see page 5744, second column, lines 2-14).
